

Others Just Can't Compete

Genuine Bendix®

Non-Genuine

The BA-921® compressors are specifically used on the Detroit® DD13®, DD15® and DD16® engines.

Genuine Bendix remanufactured compressors have

35%

less oil passing than the competition

***Higher levels of oil passing may cause downstream contamination and potential component failure.**

Don't get burned by inferior parts.
Only genuine Bendix reman BA-921 compressors for Detroit DD13, DD15 and DD16 engines are:

- ✓ Remanufactured to OE clearances and specifications
- ✓ Tested to the highest standard using proprietary test specifications
- ✓ Expertly remanufactured to outlast any competitor

Bendix Reman Compressor	DDC PN	Bendix PN
2007 DD13, DD15 & DD16	RA4721300815	K095124G
2010 DD13, DD15 & DD16	RA4711302515	K095125G
2010 DD13, DD15 & DD16	RA0011307215	K095125G

*Results based on testing process where the genuine Bendix® remanufactured BA-921® compressor showed an acceptable level of oil passage of 0.276 grams per hour, in comparison to the Detroit Diesel® rebuilt BA-921 compressor which showed a much higher level of oil passage at 0.430 grams per hour. Detroit Diesel is a registered trademark of Daimler Truck AG.

Stay on the road and out of the service bay with genuine Bendix® remanufactured compressors.

Bendix rebores the crankcase and matches the piston to maintain OE clearances each time a compressor is remanufactured.

Not maintaining the OE piston to crankcase clearances may cause a higher volume of oil passing, increasing the risk of down stream contamination and component failure.

Genuine Bendix® Remanufactured BA-921® Compressor (Detroit® DD13®/DD15®/DD16® Engines)

PARTS COMPARISON

ESS PISTON Bendix uses 100% new ESS pistons, while others use salvaged parts.	PISTON RINGS Others do not use genuine OE piston rings, which can increase oil passing of the compressor.	OVERALL QUALITY Inferior non-OE parts and rebuild processes may increase risk of failure and decrease reliability.
