

BENDIX® BA236™ AFTERMARKET REPLACEMENT PAD

Air Disc Brake Replacement Pad

The Bendix® BA236™ Aftermarket Pad is a lower cost friction replacement for 2nd and 3rd owners seeking quality and value. The BA236 pad meets FMVSS-121 brake performance standards, provides acceptable wear, and meets minimum Bendix rotor cracking requirements. Use of Bendix BA236 pads maintains your Bendix® air disc brake 5-year warranty.

The BA236 pad is part of a full line up of ADB friction offerings that also includes the Bendix® BX276™ Genuine OE Pad.

FMVSS-121 Approved

The BA236 pad meets FMVSS-121 brake performance standards.

Bendix pads + rotors: a long-life combination

It's all about the "friction couple" – which means Bendix pads are designed to be spec'd with our rotor. The materials in our pads and rotors are designed to function in concert with each other to extend the life of both components. Longer pad and rotor life means lower TCO for your fleet.

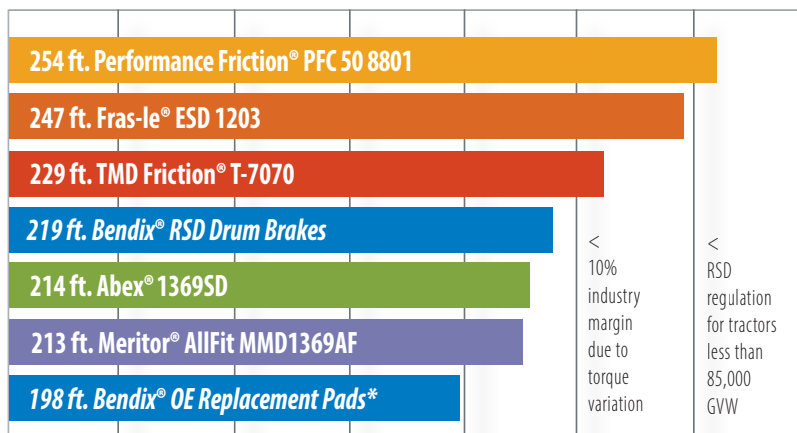

Maintain OE Stopping Distance Performance

BA236 meets all FMVSS-121 stopping distance requirements with a stopping distance of 209 feet. Testing shows many aftermarket pads increase stopping distances by up to 50-75 feet and are out of compliance with FMVSS-121.

Parking Hold Capability

All Bendix replacement pads exceed the FMVSS-121 requirement for park regulation. So, you can be confident your truck will stay safely parked, even when fully loaded. Many aftermarket replacement pads barely meet the park capability of the weight of an unloaded tractor/trailer – as a result these pads may bring an increased risk of roll away.

Stopping Distance Comparison Bendix vs. AM Pads:

Source: Bendix testing. Stopping distances are simulated based on FMVSS-121 Hot Stop and Recovery.

* Result achieved with Bendix® BX276™ OE replacement pads.

Level-B Copper Free Compliant

Bendix® BA236™ pads meet current EPA (Environmental Protection Agency) requirements for the Copper Free Brake Initiative.

Complete OE Hardware Kit

Proper maintenance of your ADB system is critical to maintain performance and service life. That's why our pad kits – which include the same hardware as our OE brakes – include all the hardware needed to do a pad replacement. Other pad kits don't provide all those components, so you'd need to reuse worn components.

And these aren't your average hardware items. We include a strengthened pad retainer spring to hold your pads properly in place during braking and a high-quality shear adaptor that acts as a fuse to protect the ADB's internal adjuster mechanism.

Use of Bendix Pads Maintains Bendix Caliper Warranty

Protect your ADB investment with the best pads for your system.

- Warranty is voided if non-Bendix pads are used
- Pads must be returned with caliper for warranty consideration

The only OEM-approved hardware kit for Bendix® air disc brakes.

Don't diminish performance, safety, or service life by choosing inferior pads for your Bendix air disc brakes.

| Description | Bendix® ADB22X® Family Pad Service Kits | |
