PISTON-TO-CRANKCASE CLEARANCE

Bendix rebores the crankcase and matches the piston to maintain OE clearances each time a compressor is remanufactured.

Not maintaining the OE piston to crankcase clearances may cause a higher volume of oil passing, increasing the risk of down stream contamination and component failure.

PARTS COMPARISON

ESS PISTON

Bendix uses 100% new ESS pistons, while others use **salvaged parts**.

PISTON RINGS

Others do not use genuine OE piston rings, which can **increase oil passing** of the compressor.

OVERALL QUALITY

Inferior non-OE parts and rebuild processes may increase **risk of failure** and **decrease reliability**.
