

The Genuine Bendix Compressor Guarantee

Quality. Commitment. High Performance.

The Bendix facility in Huntington, Indiana, is the only authorized remanufacturer of Bendix® compressors.... *no one else is authorized or approved to produce Bendix remanufactured compressors.* The Huntington remanufacturing facility maintains the same level of quality and customer service as the Bendix OEM facilities. By strategically integrating Six Sigma methodology with state-of-the-art equipment and continuous improvement processing, we guarantee that every genuine Bendix compressor is as good as or better than the original.

As the industry leader, Bendix Commercial Vehicle Systems LLC has been producing compressors longer and better than the rest. Our reputation for quality has been earned over decades of proven world class performance. Just look at the facts.

- The Bendix compressor remanufacturing Center of Excellence in Huntington is an ISO14001, QS9000 and TS16949 certified facility. This certification requires well-documented processes and sophisticated quality standards and adherence to an established set of quality processes assuring that each compressor is remanufactured under consistent, high-quality methods. Many rebuilders are simply unable to achieve or maintain the rigorous quality assurance and management standards necessary for this quality certification.
- All components are inspected and then replaced or remanufactured to the highest Bendix OEM manufacturing and product specifications, long the industry standard. Since Bendix manufacturing methods and product engineering records are proprietary, it is virtually impossible for any other rebuilder to meet these standards.
- All Bendix remanufactured compressors meet the Bendix OE manufacturing functional, end-of-line test specifications. Bendix does not share its manufacturing test specifications. Therefore, even if another rebuilder could test their product, they would be unable to guarantee testing to these stringent requirements.
- Bendix discards and replaces all wear components – o-rings, gaskets, piston rings, bearing inserts, sleeve bearings, unloader springs, seals, studs, lock washers, pipe fittings, inlet and discharge valves, inlet and discharge springs, wrist pin plugs and safety valves – with new components in all remanufactured compressors. As noted above, other rebuilders do not have access to the Bendix components, manufacturing standards or product specifications to guarantee they can meet original equipment specifications.
- During the remanufacturing process, genuine Bendix compressors are frequently upgraded with the latest manufacturing methods, technologies, and product enhancements, giving our customers product often better than the original. These upgrades are done even if the replaced compressor did not have the enhancement when new. Many times these upgrades are made in the remanufactured product in conjunction with the change in the original equipment products. Only Bendix can implement these enhancements in the remanufactured products because, once again, the proprietary nature of the product manufacturing and engineering specifications does not allow other rebuilders access to this information or these components.
- Finally, if there are insufficient remanufactured components to produce a complete compressor assembly, Bendix will, and does, substitute new assemblies as remanufactured.

Quality From Start To Finish

At Bendix our commitment to quality doesn't end when the compressor leaves our location. We stand behind every genuine Bendix remanufactured compressor with...

- complete warranty protection from one of the best programs in the industry;
- a comprehensive core return and allowance program;
- our dedicated, 100% ASE-certified sales and service teams;
- a veteran field technical support team to troubleshoot and resolve your air brake system challenges; and
- a technical support phone line – representing over 80 years of comprehensive collective experience – to supply answers to your technical questions.

Get The Best. Get Genuine Bendix.
