Bendix<sup>™</sup> BlindSpotter<sup>®</sup> Collision Warning System

# **Troubleshooting Guide**

Bendix<sup>™</sup> BlindSpotter<sup>®</sup> Collision Warning System BW2860 (Formerly VOTS0032) September 2011

# **General Warnings**

Before starting a vehicle:

- 1. Sit in the driver's seat.
- 2. Place the vehicle in neutral.
- 3. Set the parking brake.
- 4. Disengage the clutch.

Before working on the vehicle or leaving the cab with the engine running:

- 1. Place the vehicle in neutral.
- 2. Set the parking brake.
- 3. Block the wheels.

Do not operate the vehicle if the alternator lamp is lit or if the gauges indicate low voltage.

# **Suggested Tools**

Part No.	Description
5505027	Volt/Ohm Meter (Standard commercially available VOM)

For Bendix Service Parts call 1-800-AIR-BRAKE (1-800-247-2725).

# **Diagnostic Procedure**

Follow the flowchart below for all Bendix<sup>™</sup> VORAD<sup>®</sup> system failures. Perform the tests and procedures as directed by the flowchart.

# **Electrical Pretest**

#### Overview

The pretest verifies the basic electrical inputs before testing individual circuits.

#### Detection

There is no detection process specifically for the basic electrical supply. However, failures of this type are generally detected by the Bendix<sup>TT</sup> VORAD<sup>®</sup> system or the driver as some other type of fault code or symptom.

#### Fallback

There is no fallback for the electrical pretest, however, it may affect other systems.

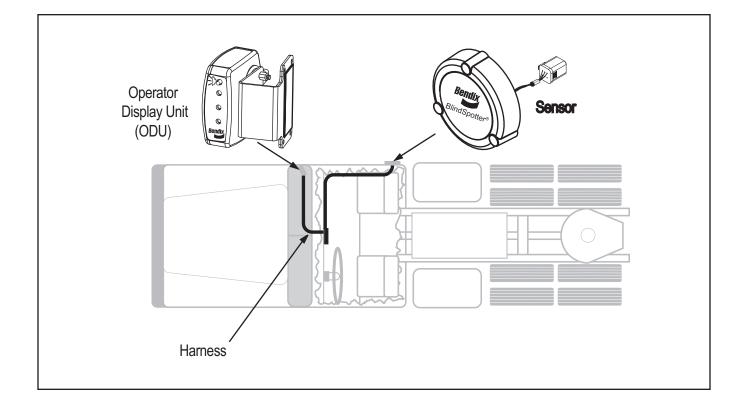

#### **Required Tools**

- Basic Hand Tools
- Digital Volt/Ohm Meter
- Troubleshooting Guide

#### **Possible Causes**

This pretest can be used for any of the following:

- Corroded Power Contacts
- Blown Fuse
- Wiring Harness
- Low Batteries

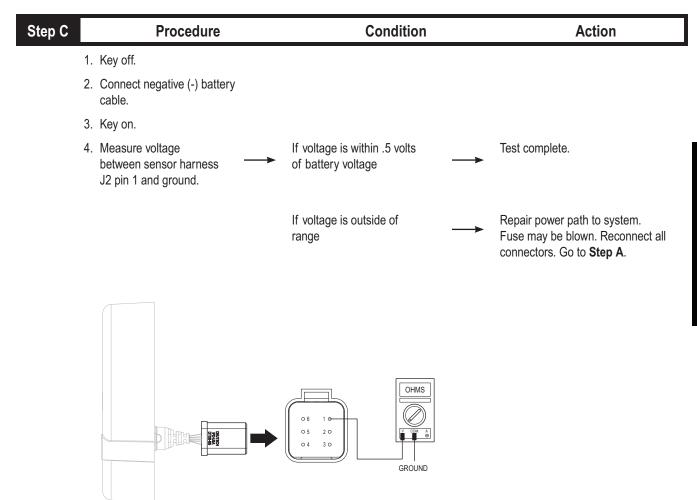

# **Electrical Pretest**

Step A	Procedure	Condition	Action
	1. Key off.		
	2. Inspect starter/battery connections for integrity.		
	3. Measure voltage across battery.	 If voltage is 11 to 13 volts on a 12 volt system or 22 to 26 on a 24 volt system	 Go to <b>Step B</b> .
		If voltage is outside of range	 Repair or replace batteries and charging system as required. Repeat this step.

Step B	Procedure	Condition	Action
	1. Key off.		
	2. Disconnect negative (-) battery cable.		
	3. Disconnect the sensor J2 harness.		
	<ul> <li>4. Measure resistance between sensor harness J2 pin 2 and ground.</li> </ul>	If resistance is 0 to .5 ohms	Go to <b>Step C</b> .
		If resistance is outside of	Repair ground path to system. Go to <b>Step A</b> .
		5 2 G	

# **Electrical Pretest, continued**

# **Power-Up Sequence Test**

#### Overview

The failure during the power-up self-check indicates a system failure.

#### Detection

The power-up self-check is performed automatically each time the key is turned on. Turn the key on and watch the Operator Display Unit (ODU). If lights on the ODU remain on after 15 seconds, or never come on, the self-check has failed.

#### Fallback

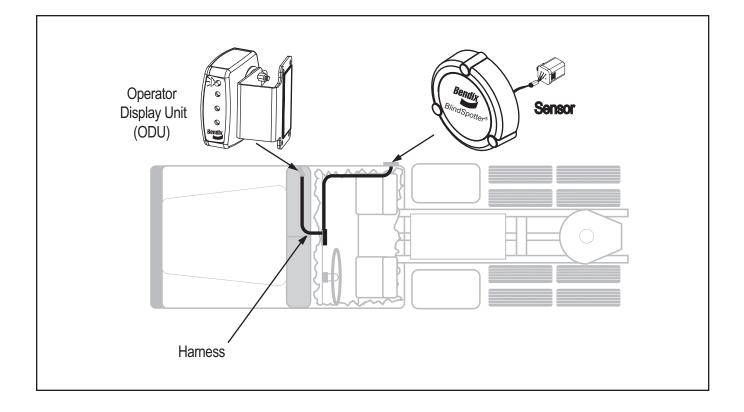

If self-check fails, the product can not perform any operations.

#### **Required Tools**

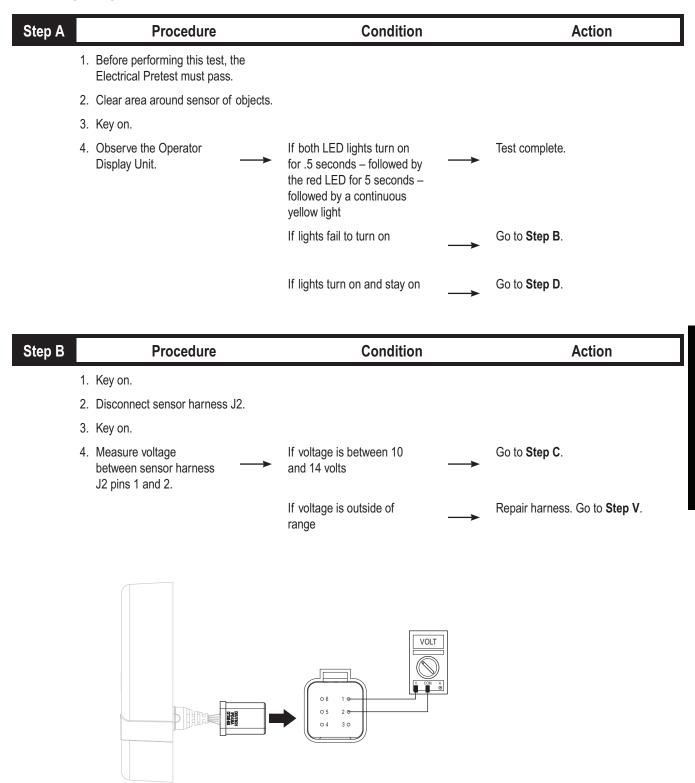

• Digital Volt/Ohm Meter

#### **Possible Causes**

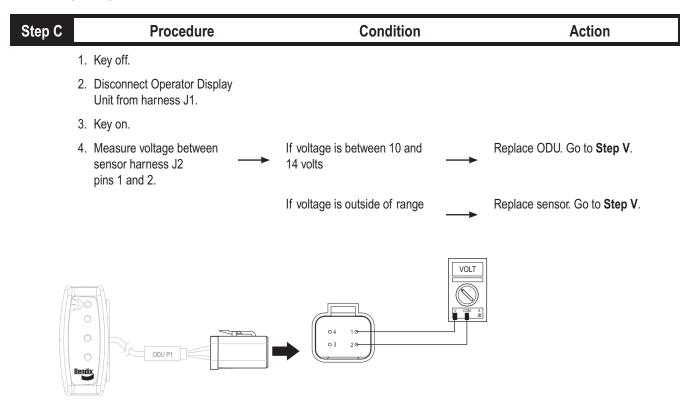

- Sensor
- Operator Display Unit
- Vehicle Harness

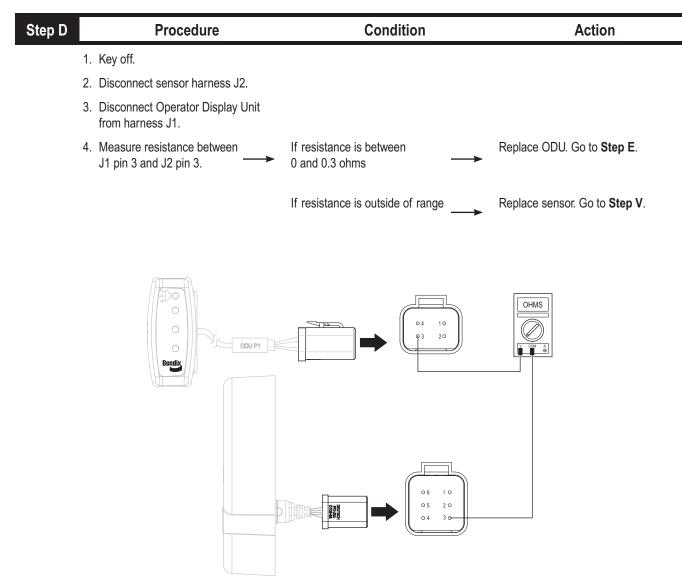

# **Power-Up Sequence Test**

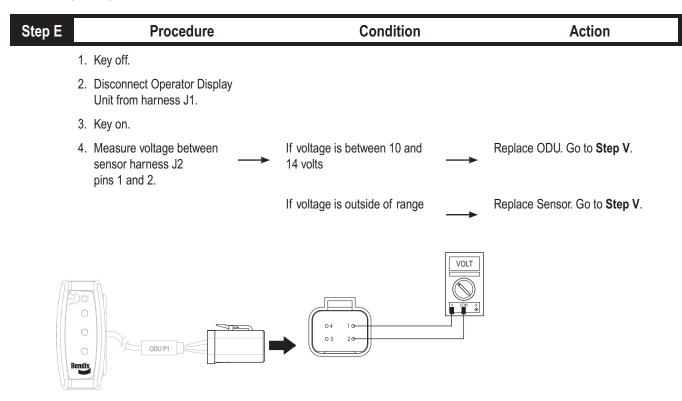

# Power-Up Sequence Test, continued

# Power-Up Sequence Test, continued

Step V	Procedure	Condition	Action
	1. Key off.		
	2. Reconnect all connectors.		
	3. Key on.		
	4. Drive vehicle to determine if problem has been corrected.	If problem is corrected	Test complete.
		If problem is not corrected	Return to <b>Step A</b> to find error in testing.

# Operator Display Unit Audible Indictor (Buzzer) Not Functioning

#### Overview

This symptom-driven test is performed when the system fails to detect objects properly.

#### Detection

The symptom is observed by the driver when:

- 1) objects closer than ten (10) feet are detected,
- 2) when the turn signal is activated, and
- 3) when no audible sound is heard.

#### Fallback

There is no fallback mode for this symptom. The system will not operate properly.

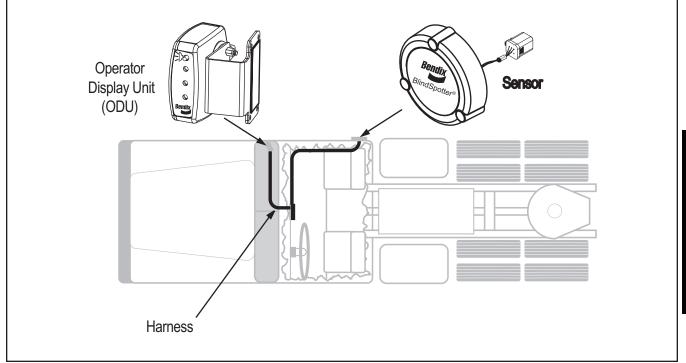

### **Required Tools**

• Digital Volt/Ohm Meter

#### **Possible Causes**

This fault can be caused by any of the following:

- Operator Display Unit
- Vehicle Harness

Operator Disp

av

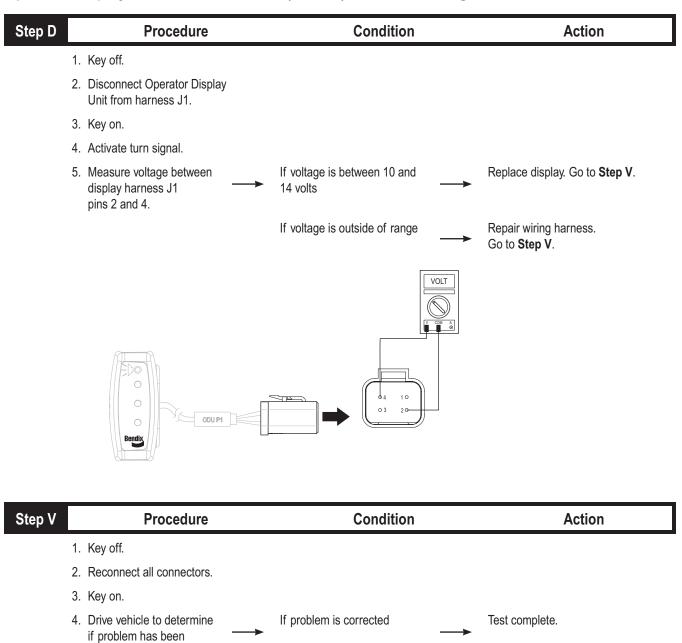

# Operator Display Unit Audible Indictor (Buzzer) Not Functioning

Step A		Procedure	Condition	Action
	1.	Key off.		
2	2.	Active turn signal.		
3	3.	Place a target between 3 and 10 feet directly in front of the sensor.	If the Operator Display Unit has red LED on and buzzer sounds	Test complete.
		Note: If both LEDs are illuminated, go to the appropriate isolation procedure.	If the Operator Display Unit has red LED on only (no sound)	Go to <b>Step B</b> .
Step B		Procedure	Condition	Action
	1.	Key off.		
2	2.	Disconnect Operator Display Unit from harness J1.		
:	3.	Measure resistance between sensor harness J1 pin 4 and turn signal source.	If resistance is between 0 and 0.3 ohms	Go to Step C.
			If resistance is outside of range	Repair wiring harness. Go to <b>Step V</b> .
		ODU P1		Furn Signal Source

corrected.
If problem is not corrected
Return to Step A to find error
in testing.

# Side Sensor Not Detecting Targets

#### Overview

This symptom driven test is performed when the system fails to detect objects properly.

#### Detection

The symptom is observed by the driver when objects at three (3) to ten (10) feet are not detected. The yellow light also continuously illuminates when the sensor has failed.

#### Fallback

There is no fallback mode for this symptom. The Sensor will not operate properly.

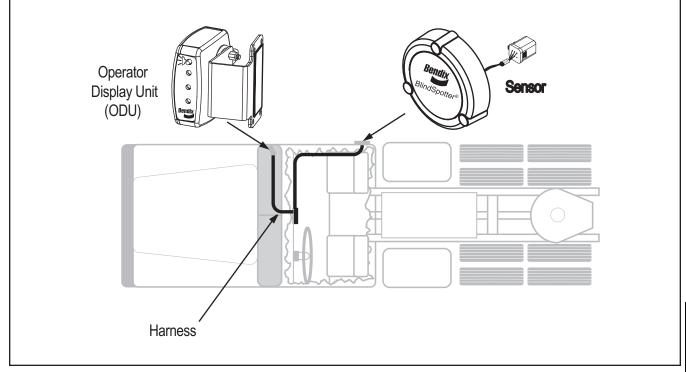

#### **Required Tools**

None

#### **Possible Causes**

This fault code can be caused by any of the following:

- Sensor
- Operator Display Unit

# Side Sensor Not Detecting Targets

Step A	Procedure	Condition	Action
	<ol> <li>Clear area around sensor of objects.</li> </ol>		
	2. Key on.		
	<ol> <li>Allow Operator Display Unit to go through self- test and shows no targets (yellow LED light should be on).</li> </ol>	<ul> <li>If both LED lights turn on</li> <li>for .5 seconds – followed by</li> <li>red LED for 5 seconds –</li> <li>followed by a continuous</li> <li>yellow light</li> </ul>	Go to <b>Step B</b> .
		If only the yellow LED light turns on for .5 seconds, followed by a continuous yellow light	Replace Operator Display Unit.
		If both LED lights turn on for .5 seconds, followed by continuous yellow and red lights	Go to the "Power-Up Sequence Test" on page 2-4.
	-		
Step B	Procedure	Condition	Action
	1. Key on.		
	<ol> <li>Key on.</li> <li>Place a target 3 to 10 feet directly in front of the Sensor.</li> </ol>	<ul> <li>If the Operator Display Unit</li> <li>indicates that a target is</li> <li>detected (red light on)</li> </ul>	Go to Step V.
	2. Place a target 3 to 10 feet directly in front of	indicates that a target is	Go to <b>Step V</b> . Replace sensor.
	2. Place a target 3 to 10 feet directly in front of	<ul> <li>indicates that a target is detected (red light on)</li> <li>If the Operator Display Unit does not indicate a target is</li> </ul>

Step V	2. Place a target 3 to 10 feet directly in front of the Sensor.	<ul> <li>indicates that a target is detected (red light on)</li> <li>If the Operator Display Unit does not indicate a target is present (yellow light on)</li> </ul>	Replace sensor.
Step V	2. Place a target 3 to 10 feet directly in front of the Sensor. Procedure	<ul> <li>indicates that a target is detected (red light on)</li> <li>If the Operator Display Unit does not indicate a target is present (yellow light on)</li> </ul>	Replace sensor.
Step V	<ol> <li>Place a target 3 to 10 feet directly in front of the Sensor.</li> <li>Procedure</li> <li>Key off.</li> </ol>	<ul> <li>indicates that a target is detected (red light on)</li> <li>If the Operator Display Unit does not indicate a target is present (yellow light on)</li> </ul>	Replace sensor.

# Side Sensor Continuously Detecting Targets

## Overview

This symptom driven test is performed when the system continuously detects objects.

#### Detection

The symptom is observed by the driver when sensor continuously detects targets.

#### Fallback

There is no fallback mode for this symptom. The Sensor will not operate properly.

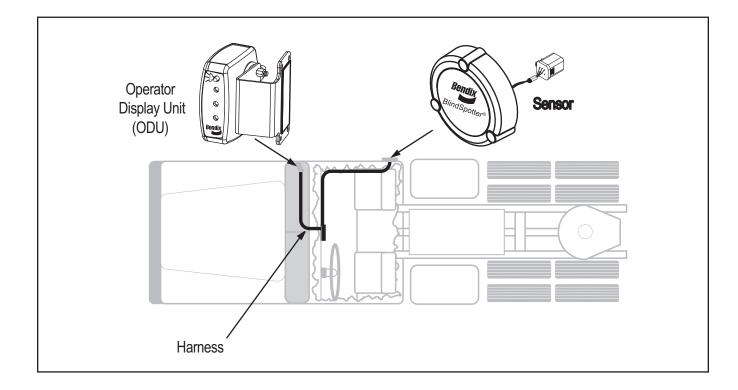

#### **Required Tools**

None

#### **Possible Causes**

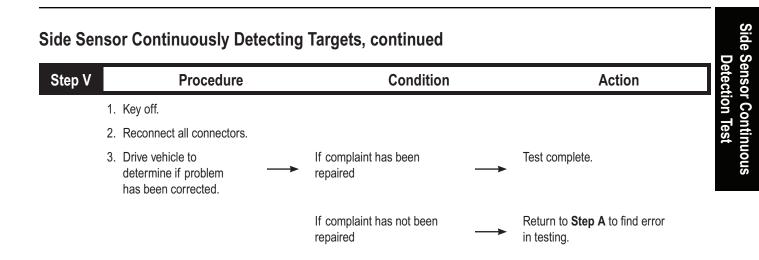

This fault code can be caused by any of the following:

- Sensor
- Operator Display Unit

# Side Sensor Continuously Detecting Targets

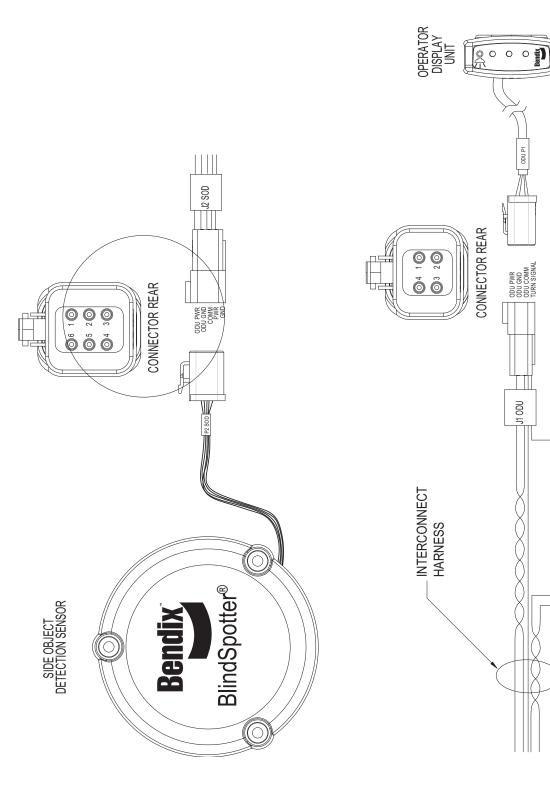

ep A		Procedure	Condition	Action
	1.	Clear area around sensor of objects.		
	2.	Key on.		
3	3.	Allow Operator Display Unit to go through self-test and shows no targets (yellow LED light should be on).	If both LED lights turn on for .5 seconds – followed by a red LED for five (5) seconds – followed by a continuous yellow light	Go to <b>Step V</b> .
			If both LED lights turn on for .5 seconds, followed by a continuous red light	Go to <b>Step B</b> .
			If only red LED lights	Replace Operator Display Unit.
ep B		Procedure	Condition	Action
· -	1.	Procedure Key on.	Condition	Action
,			Condition	Action
	2.	Key on. Remove Sensor from mounting	Condition	Action
2	2. 3.	Key on. Remove Sensor from mounting position. Move Sensor out away from the	Condition	Action
2	2. 3. 4.	Key on. Remove Sensor from mounting position. Move Sensor out away from the vehicle and place in an open area.	Condition	Action Reposition sensor on vehicle to allow clear detection zone. Go to Step V.
