

SafetyDirect® by Bendix CVS

OVERVIEW

This vehicle is now connected to the SafetyDirect® by Bendix CVS video-based driver safety platform. The system collects safety data from the vehicle – including video of severe events – and wirelessly transmits real-time data and event-based information from the vehicle's J1939 network to the back office to enable fleets to make the best and most efficient use of this data in safety and driver training efforts.

The SafetyDirect system has two major components: the Bendix™ AutoVue® front facing camera (mounted on the inside of the windshield) and the SafetyDirect Web Portal Processor. Together, they collect complex safety data and video that the vehicle's On-Board Computer (OBC)/Telematics system transfers to the SafetyDirect web portal (safetydirectportal.com) for review.

When a trigger event occurs, SafetyDirect automatically records five (5) seconds of video before and after. Vehicle data and, in some cases, video, is saved in the system for later download via the vehicle telematics system. No change to the driver's behavior is required.

The Bendix™ AutoVue® 3G Camera is pre-aligned during installation and no adjustment should be needed. In normal use, the SafetyDirect Web Portal Processor needs no attention or maintenance.

SYSTEM OPERATION

Just after vehicle start up, you will see the illuminated green light on the dash switch to indicate that the product is operating

normally. In this installation the switch has no function. If the switch is pressed, the green light will turn off, but the SD function will continue to operate. Pressing the switch a second time will cause the green light to illuminate. The amber light on the switch will turn on and off depending on driving conditions. A system fault is indicated by the green light being extinguished and the amber light being illuminated.

WARNING

Bendix safety technologies complement safe driving practices. No commercial vehicle safety technology replaces a skilled, alert driver exercising safe driving techniques and proactive, comprehensive driver training. Responsibility for the safe operation of the vehicle remains with the driver at all times.
